

[ddns](#), [dns](#), [dinámico](#), [dynamic](#)

DDNS

Lo primero es activar la opción en el menú Network → DNS y habilitamos la opción Fortiguard DDNS. Seleccionamos el interfaz wan de conexión. En la casilla **Server** seleccionamos en el desplegable el dominio que vamos a usar y en **Unique Location** El nombre único para nuestra sede

The screenshot shows the FortiGate configuration interface for DDNS. The left sidebar has 'DNS' selected. The main configuration area is titled 'FortiGuard DDNS' and includes the following fields:

- Interface: wan1
- Use Public IP Address:
- Server: fortiddns.com
- Unique Location: oatsbt (with a green checkmark and 'Available!' text)
- Domain: oatsbt.fortiddns.com

An 'Apply' button is located at the bottom right of the configuration area.
