

Auto Registration

Para crear unas acciones de autoregistro vamos a **Configuration→Actions** y en el desplegable de la derecha **event source** seleccionamos **Auto Registration** y pulsamos el botón **create action**

En la primera pestaña de **Action** rellenaremos el nombre que queramos darle a esta acción y en el campo **New condition** creamos la condición “Host Metadata like Linux” y pulsaremos al enlace azul “**Add**” que está en el recuadro de new condition.

no pulsar el botón Add, hasta haber añadido primero las condiciones

The screenshot shows the Zabbix Actions configuration interface. At the top, there are two tabs: 'Action' (selected) and 'Operations'. Below the tabs, there is a form for creating a new action. The 'Name' field contains 'Registrar equipos Linux'. Under the 'Conditions' section, there is a table with one row. The first column is 'Label' (empty), the second is 'Name' (empty), and the third is 'Action' (empty). Below this table, there is a 'New condition' section with a dropdown menu set to 'Host metadata' and an operator 'like'. A text input field next to it contains 'Linux'. Below this input field is a blue link labeled 'Add'. Underneath the 'New condition' section, there is a checkbox labeled 'Enabled' which is checked. At the bottom of the form are two buttons: 'Add' (highlighted in blue) and 'Cancel'.

The screenshot also shows a second, identical configuration window below the first, indicating the state after the 'Add' button has been clicked.
