

[zabbix,snmp](#)

Monitorizar un Host por SNMP

Entramos en el frontal Web de Zabbix → Menu configuration →Hosts

Pulsamos en el botón de la esquina superior derecha **Create host**

The screenshot shows the 'Create host' dialog box in the Zabbix web interface. The 'Host' tab is selected. The 'Host name' field contains '127.0.0.1'. The 'Visible name' field is empty. In the 'Groups' section, there is a list of available groups: 'Aplicaciones', 'Backup', 'Cabinas', 'clusterpro1 (vm)', 'clusterpro2 (vm)', 'clusterpro3 (vm)', and 'Discovered hosts'. A 'New group' input field is present. Below the groups, there is a table for 'Agent interfaces' with one entry: IP ADDRESS: 127.0.0.1, CONNECT TO PORT: 10050, and a radio button for 'IP'. There are also sections for 'SNMP interfaces', 'JMX interfaces', and 'IPMI interfaces', each with an 'Add' button. A 'Description' text area is empty. At the bottom, there is a 'Monitored by proxy' dropdown set to '(no proxy)', an 'Enabled' checkbox checked, and 'Add' and 'Cancel' buttons.
