

[zabbix,snmp](#)

## Monitorizar un Host por SNMP

Entramos en el frontal Web de Zabbix → Menu configuration →Hosts

Pulsamos en el botón de la esquina superior derecha **Create host**

En el campo host name ponemos un nombre descriptivo. En la casilla groups seleccionamos o creamos el grupo donde queremos encuadralo.

Como sólo vamos a monitorizarlo por snmp . Pinchamos en remove del **agent interfaces** y pulsamos en add de **SNMP interfaces**

En nuestro caso quedaría de la siguiente forma

Last update: seguridad:monitorizacion:zabbix3:snmp http://wiki.intrusos.info/doku.php?id=seguridad:monitorizacion:zabbix3:snmp&rev=1461756741  
2023/01/18 14:39

The screenshot shows the 'Host' creation form in Zabbix. The 'Host name' field contains 'Servidor'. In the 'Groups' section, 'Servidores Windows' is selected from a list of available groups. Other groups listed include SAI, Servidores Linux, Servidores Vcenter, Servidores Web, Switch, Templates, Tomcat, Virtual machines, VoIP, and Zabbix servers. Below the groups, there's a 'New group' input field. The 'Agent interfaces' section has an 'Add' button. The 'SNMP interfaces' section shows one entry for IP 192.168.1.200 with port 161, using bulk requests, with options to 'Add', 'Edit', or 'Remove'. The 'JMX interfaces', 'IPMI interfaces', and 'Description' sections each have an 'Add' button. At the bottom, there are 'Monitored by proxy' and 'Enabled' checkboxes, both checked, followed by 'Add' and 'Cancel' buttons.

Si queremos podemos seleccionar una plantilla para nuestro host

The screenshot shows the 'Hosts' tab in Zabbix with the 'Templates' tab selected. The 'Linked templates' section shows a table with columns 'NAME' and 'ACTION'. A search bar at the top of this section contains 'Template OS Windows'. Below it, a 'Select' button is visible. The 'Link new templates' section has a search bar containing 'Template OS Windows' and an 'Add' button. At the bottom are 'Add' and 'Cancel' buttons.

En el caso de usar una comunidad de lectura distinta de la de por defecto, la definimos en la pestaña

Host groups   Templates   **Hosts**   Maintenance   Actions   Discovery   IT services

## Hosts

Host   Templates   IPMI   **Macros**   Host inventory   Encryption

Host macros   Inherited and host macros

MACRO	VALUE
[\$SNMP_COMMUNITY]	public

Add   Remove

Add   Cancel
